

## Meter Calibration

### How much are you giving away?

**99.7% accuracy  
can cost you a lot  
of MONEY...**

Based on 99.7% Accuracy:

If you pump 100,000 gallons thru your meter you are giving away 300 gallons @ \$3.50/gallon = **\$1,050**

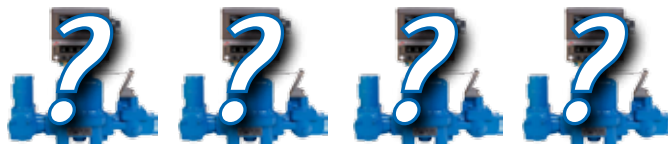

250,000 gallons 750 gallons **\$2,625**

500,000 gallons 1,500 gallons **\$5,250**

1,000,000.....

**1,500 gallons @ \$3.50/gal = over \$5,000 loss... per meter!**

How many meters do you have?

**How much can you afford to give away?**

*“Close Enough” is OK for horseshoes.*

If your meters are accurate to **99.7%** ...

...technically you are “in compliance” and don’t need to calibrate.

**BUT meters that are only 99.7% accurate  
can cost you thousands of dollars per year.**

***FACT: Uncalibrated meters typically OVER-DELIVER***

Meters that are **out of calibration** allow product to pass through without being metered. Most states allow a tolerance of .3%. But if your meters are averaging .3% loss, then you are giving away:

- **300 gallons** per every 100,000 gallons metered
- **750 gallons** per every 250,000 gallons metered
- **1,500 gallons** per every 500,000 gallons metered
- and so on...

**When it comes to your meters 99.7% isn’t very close.**

***FACT: Uncalibrated meters typically only need a field adjustment!***

**Call Northwest Pump & Equipment today  
to schedule your meter calibration.**

**Our high-volume prover performs calibration  
for meters up to 450 gallons per minute.**

**Meters calibrated to unprecedented accuracy.**

***Can you really afford to be “Close Enough”?***
